Publishing and Advertising Offices: Headington Hill Hall, Oxford OX3 0BW, England. Subscription rates (1979) per annum (including postage and insurance): US $220.00 for libraries, university departments, government laboratories, industrial and all other multiple-reader institutions. Specially reduced rates to individuals: In the interests of maximizing the dissemination of the research results published in this important international journal we have established a two-tier price structure. Any individual, whose institution takes out a library subscription, may purchase a second or additional subscription for personal use at a much reduced rate of US $30.00. Published monthly.

All subscription enquiries should be addressed to: The Subscription Fulfillment Manager, Pergamon Press Limited, Headington Hill Hall, Oxford OX3 0BW.

**Microform Subscriptions and Back Issues**

Back issues of all previously published volumes are available in the regular editions and on microfilm and microfiche. Current subscriptions are available on microfiche simultaneously with the paper edition and on microfilm on completion of the annual index at the end of the subscription year.

# SULFUR IN THE ATMOSPHERE

**Vol. 12, Nos. 1-3**

## SUBJECT INDEX

Atmospheric sulfur, see sulfate, sulfur, sulfite, sulfur dioxide
  residence times, 671, 549
Aerosol
  chemical composition, 39
  coagulation, 171, 179, 187
  concentration, 297, 537, 549, 641
  condensation, 171, 187, 227
  external and internal mixtures
    continental, 135, 161
    marine, 135, 161
    sulfate aerosol, 161, 227
  growth kinetics, 135, 179, 187, 297
    in power plant plume, 297
  maritime, 135, 161, 681, 699, 707
  nuclei formation rate, 171, 179, 187
    critical radius, 171
    in power plant plume, 135, 329, 537
    in the atmosphere, 135
    theory, 187
  sampling, 55, 113, 613, 759
  size distribution, 113, 135, 537
    in power plant plume, 135, 323
    self-preserving, 187
  smog chamber experiments, 273
  total suspended particles
    emissions, 641, 649
Ammonia
  concentration, 39, 641, 681
  denuder, 55
  seasonal variation, 681
  sources, 681
  vertical distribution, 681
Ammonium acid sulfate
  analysis
    selective dissolution with isopropanol, 113
    thermal analysis, flame photometry, 113
    raman spectroscopy, 113
  concentration, 39
Ammonium ion
  analysis
    alkali addition, ion specific electrode, 25, 55
  concentration, 25
